

ForgeCloud Documentation Package

Index of separate frontend, backend, cloud, DevOps, observability and Antigravity PDFs

This package contains separate PDF design documents for the ForgeCloud project. The content is based primarily on the uploaded ForgeCloud Project Document, including its product scope, architecture, technology stack, core modules, networking concepts, roadmap, reliability experiments and suggested project metrics.

Files Included

File	Contents
01_ForgeCloud_Product_and_Requirements.pdf	Product, objectives, modules, user journey and measurable outcomes
02_ForgeCloud_Frontend_Design.pdf	React frontend, pages, components, UX and API integration
03_ForgeCloud_Backend_API_Design.pdf	FastAPI control plane, APIs, services, auth and lifecycle
04_ForgeCloud_Database_Design.pdf	PostgreSQL schema, relationships and audit model
05_ForgeCloud_AWS_Terraform_Networking.pdf	AWS architecture, Terraform and network request flow
06_ForgeCloud_Docker_Kubernetes.pdf	Docker, Kubernetes/EKS, health checks and HPA
07_ForgeCloud_CICD_GitOps.pdf	GitHub Actions, ECR, Argo CD and GitOps
08_ForgeCloud_Observability_Security_Reliability.pdf	Observability, security and controlled failure experiments
09_ForgeCloud_Complete_System_Design.pdf	End-to-end architecture and requirements
10_ForgeCloud_Antigravity_SuperPrompt.pdf	Master prompt for phased implementation in Antigravity

Source Alignment

The uploaded project document identifies ForgeCloud as a software-only cloud + web development + DevOps + computer networks project using AWS, and defines React/FastAPI/PostgreSQL, Terraform, Docker, Kubernetes/EKS, ECR, GitHub Actions, Argo CD, Prometheus, Grafana, OpenTelemetry and CloudWatch as the principal stack.
